Abstract (en)

[origin: EP2226605A1] The device has a cavity constitutive of combustion chamber that is filled with explosive powder. A control unit (18) initiates the explosive powder, where the explosive powder comprises nano-thermites. A tube (14) is placed in an extension of the combustion chamber. The chamber has a surface formed by a head of a piston or an element placed opposite to the head. A locking unit locks a piston inside a bore of the device. Cylindrical elements are respectively placed in both sides of the piston.
