Abstract (en)

[origin: EP2226808A1] The tray (1) has a set of lever arms (9a, 9b) extending below a disk-shaped information carrier present in a cavity (2), and another set of lever arms (8a, 8b) i.e. push-buttons, arranged outside of the cavity. Rockers (7a, 7b) are arranged in a region of the cavity. The former set of arms is upwardly moved during actuating the other set of arms from resting position into removal position such that the carrier is lifted from the cavity. A lever formed by the former set of arms is longer than another lever formed by the latter set of arms when viewed from a pivot point of the rockers. An independent claim is also included for a package comprising a cover for covering a cavity of a tray.
