Abstract (en)
[origin: US2011003530A1] Disclosed is a driving toy, especially for guided motor-racing circuits, comprising an electric driving motor that has two electric driving motor terminals for feeding an electric driving voltage. The driving toy is arranged such that a short-circuit device is provided in the driving toy and is electrically connected to the two electric driving motor terminals. The short-circuit device is designed such that the same optionally short-circuits the two electric driving motor terminals.
