Abstract (en)

[origin: WO2009053434A1] The present invention relates to packaging (10) for storing and/or transporting and/or holding, in a suspended vertical position, articles (20) equipped with flanges, said packaging comprising a plate (30), said plate (30) comprising a plurality of rails (31) positioned next to one another. Supporting lips (29) are arranged along rails, a lip (29) and a rail (31) thus forming with a lip (29') of an adjacent rail (31') and this rail (31') a groove (32). A pair of adjacent lips (29, 29') are capable of supporting and storing said articles (20). The plate (30) also comprises an upper wall parallel to the plurality of openings for preventing said articles from coming out of said plate (30) when the latter pivots about a horizontal axis. The rails and the lips are free of bumps, thus enabling the articles (20) to slide along the rails (31). The packaging of the invention may also comprise a box (40) for holding the plate (30) and a collar (60) for surrounding the plate (30).
