Abstract (en)  
[origin: WO2009067829A1] The shower head comprises a housing (2) and a valve (V) disposed therein, said valve having a valve body (14) that is disposed in a water channel (33). The valve body is connected to an actuating body (3) and interacts with at least one valve seat (24, 25) for closing and/or opening or switching the water channel (33). A pulsator wheel (38) can be connected to the water channel (33) and is detachably locked to a switching body (40) that is operatively connected to the actuating body (3). The actuating body (3) is supported on the housing (2) rotatably about a longitudinal axis (45) of the valve body (14) and thus connected to the switching body (40) such that it can be adjusted with a rotational movement of the actuating body (3) about the longitudinal axis (45) in order to lock or release the pulsator wheel (38).
