Abstract (en)
[origin: WO2009064179A1] A container (1) is formed by separating a pushed-in cup in which a lower portion (3) and an upper portion (7) of the side wall are more rigid than a flexible middle portion (9) present in between. The container (1) can be extracted in a simple manner by taking the upper portion (7) of the side wall with one hand and holding a protruding gutter (19) at the bottom (5) with the other hand. Furthermore, the container (1) has a cylinder (13) which is to be pushed downwards between the lower portion 3 and upper portion (7) of the side wall after the cup has been extracted.
