Abstract (en)

[origin: WO2009081050A2] The invention relates to a packaging (1) for a food product, that comprises a container (2) with an opening defined by a frame (32) and a closing system (3) including a lid (31) hinged relative to the container (2) and capable of closing the opening. The locking of the lid in the closed position is done by a locking plate (41) connected to the lid and a catching ledge connected to the frame. The plate pivots about an axis between a locking position with its gripping portion engaged with said ledge and an unlocked position. The plate pivots into the unlocked position by manual actuation of an actuation portion opposite the gripping portion towards a central axis (Z). The upper face of the lid includes a recess (47) opening on the side, and the actuation portion of the plate is advantageously located at the opening of the recess in order to pivot therein and assume the unlocked position.
