Abstract (en)
[origin: WO2009086949A1] The invention relates to a blister pack (1) for a product emitting a fragrance, comprising a blister card (2) made of a material particularly containing cellulose, a blister cap (3) made of a plastic, particularly transparent plastic, wherein the blister cap (3) is connected to the blister card (2) such that at least one chamber is created for accommodating the product emitting the fragrance, wherein the blister card (2) has a first receptacle (4a) defined by the outer contour of the blister card edge (6) and a second receptacle (4b) defined by the outer contour of the blister card edge (7), wherein the first receptacle (4a) and the second receptacle (4b) are positioned substantially across from each other, and the contour of the blister card (2) has a bulging in the direction of the center line (M) in the region of the receptacle (4a, 4b), and the chamber for accommodating the product emitting the fragrance is disposed below the receptacles (4a, 4b), wherein the blister card (2) can be accommodated in a first retaining element (5a) and a second retaining element (5b) by means of the receptacles (4a, 4b), and the retaining elements (5a, 5b) interact with the corresponding receptacles (4a, 4b) of the blister card (2) such that the blister pack may be disposed with the receptacles (4a, 4b) hanging freely suspended in the retaining elements (5a, 5b) against gravity.
