Abstract (en)

[origin: WO2009068162A1] A device for treating bottles or similar containers (2), particularly a bottling machine with a rotor (4) that is rotatably supported on a machine frame (3) about a machine axis (VA) and comprises at least one container carrier (7). The invention further comprises a bearing arrangement (13, 13a) for the rotatable support of the rotor (4) on the machine frame (3) about the machine axis (VA), wherein the bearing arrangement (13, 13a) is formed by a central bearing axis (14, 14a) arranged on the identical axis as the machine axis (VA) on the rotor (4) or on the machine frame (3), by at least one bearing element (15, 15a) surrounding the bearing axis (14, 14a) on the machine frame (3) or rotor (4), and by at least two bearing sections, which are spaced from each other in the direction of the machine axis (VA) and have at least one bearing (16-19, 22) between the bearing axis (14, 14a) and the at least one bearing element (15, 15a).
