Abstract (en)
[origin: US2010263226A1] A laundry drying device having a washing drum; a moisture determining device to determine a moisture content of process air evacuated from the washing drum, wherein the moisture determining device has at least one temperature sensor; and a cooling body to cool the process air, wherein the cooling body has an inlet side, an outlet side, and an inlet for a medium that flows through the cooling body or that is located in the cooling body. A first temperature sensor is arranged behind the inlet of the cooling body; a second temperature sensor is arranged at the outlet side of the cooling body to measure an outlet temperature of the medium; and a third temperature sensor is arranged at the inlet side of the cooling body to measure an inlet temperature of the medium. The medium is the process air or a coolant.
