Abstract (en)

[origin: WO2009067070A1] The present invention refers to a device to fit up sheet units (1) preferably wall elements (2) having two opposite parallel extension surfaces (3) and an edge area (4) along its circumference (5), which is intended to be fixed to a support (8), e.g. a floor, a ceiling, a wall by at least one elongated profile/ profile portion (6) extending in a direction (9) in parallel with the support (8) in order to enclose said edge area (4). At least one part of the profile (6) extends mainly in parallel with and in a predetermined distance (10) from at least one of said extension surfaces (3) along the edge area (4) in creating at least one elongated space (7), which extends in said direction (9) and which is intended to be filled with joint sealing compound in constituting a water- repelling, elongated joint (11).
