Abstract (en)

[origin: WO2009088480A1] The present inventors devised, among other things, system, methods, and interfaces for researching, evaluating, and comparing expert witnesses. One exemplary system includes interfaces that facilitate users entering queries regarding experts based on name or subject matter and filtering search results based on damage awards, case types, attorneys, clients and date range. The system also enables side-by-side comparisons of the cumulative litigation history for multiple experts, and provides an expert challenge report that indicates whether an expert has been challenged in past litigation, the result of any challenges, the presiding judges in the any challenges, and the text of the challenged testimony.
