Abstract (en)

[origin: EP2228255A1] The device (D) has a lower flange (FL1) comprising a main part (PP1) extended towards the front by an end part. A support plate (PS) comprises an upper surface (FSP) for supporting an object and a lower surface equipped with a semi-circular groove. The support plate is driven in rotation around an axis between retracted and deployed positions. The plate is placed above the main part of the lower flange in the retracted position. The plate partially rests on the end part and is blocked by a stud stopped against an end of the groove in the deployed position.
