Abstract (en)

[origin: EP2228279A2] The vehicle has a contactlessly working jam prevention device (1) including inner and outer contactless sensors (3, 4) e.g. light barriers, for detecting an obstacle in a door area. The prevention device has a controlling device (2) that controls a door movement during the occurrence of the obstacle. The controlling device is designed such that a door is operated in closing direction when the inner contactless sensor is interrupted, and a closing movement of the door is stopped when the outer contactless sensor is interrupted.
