Abstract (en)

A method of knitting a tubular fabric which can continuously form a racked pattern with stitches transversely inclined on a circumferential face of the tubular fabric is provided. The method of knitting a tubular fabric is a method of knitting a tubular fabric knitted using a weft knitting machine provided with at least a front and back pair of needle beds, the front and back needle beds being configured capable of relative racking, and the tubular fabric having a racked pattern with stitches transversely inclined, and the method is characterized in that when an inclination direction of the stitches is to be changed from right to left, the stitches at the left end of the front fabric retained by knitting needles of the front needle bed are transferred to empty needles of the back needle bed, and the stitches at the right end of the back fabric retained by the knitting needles of the back needle bed are transferred to the empty needles of the front needle bed.
