Abstract (en)

[origin: EP1722156A1] The lamp (1) has light modules (2a-2e) joined together and designed as a light source. The modules are provided for producing light and tiltable with respect to each other. One of the modules arranged at an edge area of the lamp is fastened to a lever in a flexible manner, where the lever is supported at the central module and provided with sections. The sections are connected with one another by a fixing device, which permits an angular misalignment of the sections.
