Abstract (en)  
[origin: WO2009072865A2] An extensible table with a top panel (30) fixed to a main frame (10). A sliding frame (50) can be pulled away from the top panel. (30) thereby pulling along an extension leaf (40) stored below the top panel (30). When the extension leaf (40) is fully clear of the top panel (30), the sliding frame (50) is pushed towards the center of the table, causing the extension leaf (40) to rise up to the same height as the top panel (30) and a continuous table-top surface is formed. To transform the table back to its initial size, the sliding frame (50) is again pulled away from the center of the table, towing the extension leaf (40) along with it. A guide rail (42) located on the underside of the extension leaf (40) drops it back to its initial height. The sliding frame (50) is then pushed inwards again, so the extension leaf (40) slides underneath the top panel (30).
