Abstract (en)

[origin: WO2009080503A1] An elevator comprises a first elevator cab, a second elevator cab and a counterweight, wherein the counterweight, the first and the second elevator cab are coupled together via support means for lifting or holding, wherein the counterweight, the first and the second elevator cab are also coupled together via compensation means, and wherein the compensation means runs via at least one deflection roller. The elevator also comprises a braking mechanism for applying dissipative braking torque countering its rotation on the deflection roller.
