Abstract (en)
[origin: WO2009086816A1] The present invention relates to an illumination device (1). In order to provide an illumination device (1) that is simple to operate and avoids the disadvantages of the illumination devices of the prior art, it is proposed according to the invention that the base unit (2) comprises at least one luminous element (5) and the illumination unit (3) comprises at least one reflection means (8). The center of gravity of such an illumination device (1) is thereby displaced downward in the base unit, which simplifies set-up. Using a blower a flexible balloon sleeve, for example, can be stretched, illuminated by the luminous element, and the light cast to the surrounding area either directly or indirectly by means of the reflection means (8).
