Abstract (en)
[origin: GB2451109A] An electrically heated towel 305 rack has an array of hollow bars which are joined into a general ladder shaped configuration by a plate joined at an end of the respective bar array, and possibly also a second plated joined at the other end. This forms a rigid sub assembly such that a flexible electrical heating wire can be threaded through the array during manufacture. Covers 210 are then placed over the plate and bar assembly to cover the wires.
