Abstract (en)
[origin: US2011002498A1] There is provided an in-ear earphone comprising a housing (100), a transducer housing (200) and a support unit (300). The transducer housing (200) serves to receive an electroacoustic transducer. The support unit (300) is connected to the housing (100) and is adapted to be anchored in a concha of a wearer. The support unit (300) is at least partially made from a soft flexible material. In that way it can be ensured that the in-ear earphone can be anchored in any concha of a wearer.
