Abstract (en)
A cabinet (1) is described, comprising an opening (2) defined by an angular border (20) and an upright (21) and a shelf (5) that can be pulled out of said opening to pass from a retracted position inside the cabinet to an extracted position outside the cabinet. The cabinet comprises: a column (C) disposed inside the cabinet behind said upright (21), an L-shaped bracket (3) provided with a short arm (31) mounted to revolve around the column (C) and a long arm (32), a curved guide (4) joined with said shelf (5) wherein a pin (33) slides joined to said long arm (32) of the bracket, and a linear guide (6) joined to said long arm (32) of the bracket wherein a pin (8) slides and revolves joined to said shelf (5).
