Abstract (en)
[origin: EP2229866A2] The dishwasher (1) has a control device (14) to call a set of wash programs for controlling a wash cycle for a set of washing items to be washed. A fresh water inlet device (5) receives fresh water from an external cold water supply e.g. cold water pipe. A fresh water reservoir (8) is filled with fresh water by the fresh water inlet device, where the preset volume of the fresh water is stored in the fresh water reservoir that is sufficient to cover fresh water requirement of the wash cycle in the wash programs. The reservoir is made of polypropylene.
