Abstract (en)

[origin: EP2230203A2] The unit (1) has a support element i.e. support roller (12), for supporting a flat article (5) i.e. printed product, against pressure of a pressing device (2). The support element is compliant and flexible in a cover region (15). The support element comprises a rotation axis, and the pressing device comprises a pressing element (26) for pressing the flat article. An axis of the pressing element is displaced with respect to the rotation axis of the support element in a conveyor direction. The pressing device comprises a pressure roller and a rotating pressing edge. An independent claim is also included for a method for accelerating or decelerating a stream of conveyed flat articles.
