Abstract (en)

[origin: EP2230338A1] The arm has a downwardly open U-shaped carrier (1) in which a U-shaped slide is arranged. The slide includes transitions, sections and a projection on an upper side. The transitions, the sections and the projection cooperate with the carrier in such a manner that the slide is automatically movable against an inner vertical side surface of the carrier during fixation on the slide on an inner horizontal upper side of the carrier by corresponding actuation of an adjusting and fixing device (4). The side surface is adjacent to a peripheral radius.
