Abstract (en)
[origin: EP2230372A1] The chamber has a single member entry door (2) comprising a passage leaf (4) and a releasing leaf (5) mounted on respective vertical posts of fixed casing frames (6) by round pivot connections (9), where the passage leaf cooperates with an individualization cabin (3). The connection authorizes pivoting of the leaves to open the leaves at the interior of a protected space (1) for permitting passage of large objects or at the exterior of the protected space in case of lack of place at the interior or for assisting emergency evacuation of persons in the space.
