Abstract (en)  
[origin: WO2009090014A1] A printing device (7) for mobile applications, such as a tachograph (1), comprising a housing (11), which has a bottom (16) opposite a housing top and two side parts (12, 13) rigidly connected to one another, which in the operating position extend from a front of the housing (11) to a back, comprising a printing unit (48) provided in the housing (11), a paper pressure pad (43) being disposed opposite said printing unit, and comprising a paper-receiving unit (34) in the housing (11) for receiving a supply of paper to be printed in the form of a roll; in order to achieve a design that enables easy paper replacement, the bottom (16) carries the paper pressure pad (43) and the same is held by the side parts (12, 13) in the rear region such that it can fold down, wherein the bottom (16) releases the paper-receiving unit (34) in the housing (11) in the folded-down state in which the underside of the housing (11) is open.
