Abstract (en)
[origin: WO2009089927A1] A cover (3) for closing a container (1), which has a peripheral thickened area (2) on its upper edge, wherein said cover (3) is deep-drawn or produced in the injection-molding method from a plastic film and has a boundary flange (4), which overlaps the thickened area (2) and is directed essentially downward, wherein said boundary flange (4) is implemented as inclined at least slightly outward and is provided with a plurality of inwardly directed projections (5), which are capable of engaging below said thickened area (2) of said container (1).
