Abstract (en)

[origin: WO2009090301A1] The invention relates to a method for manufacturing a fiber-reinforced concrete column (1) used in the construction industry, in which method one or more pipes (6), such as a steel pipe, is brought to a base (3), and fixed to the aforementioned base, after which the pipe is filled with fiber-reinforced concrete (2), simultaneously vibrating the concrete and/or the pipe, and in which method the pipe is filled with fiber-reinforced concrete via a lead-in (7) in the bottom part of the pipe. The invention also relates to a fiber-reinforced concrete column.
