Abstract (en)

[origin: WO2009086901A1] The invention relates to a conductor track carrier (10), particularly a pressed screen that is preferably insert-molded with plastic or a rigid/flexible circuit carrier, comprising one or more conductor tracks (12), which are received and held at least partially by a conductor track carrier component (14) designed in one piece. According to the invention, the conductor track carrier component is designed in such a way that it receives and holds furthermore at least one component of one or more sensors (16). Furthermore, the invention relates to a method for the production of such a conductor track carrier (10).
