Abstract (en)
[origin: WO2009081030A2] The invention relates to a method for broadcasting customised information, for a given type of information, on an IP television network, wherein said method comprises: storing the preferences of the users of at least one IP television network terminal, for the given type of information; creating customised information data for at least said IP television network terminal; inserting customised information data broadcasted in a point-to-point (unicast) mode, into the stream of data broadcasted in multipoint network connection (multicast) mode.
