Abstract (en)  
[origin: WO2009074167A1] The object of the present invention is a photovoltaic solar roof in which the photovoltaic panels comprise insulating and drainage slabs finished in a photovoltaic laminate, which rest on the roof by means of their base which comprises plates made from insulating material in such a way that there are no attachments which pass through the waterproofing system of the building roof, and with the central part provided with a layer of porous concrete through which water drains from any rainfall on the roof, in addition to other porous concrete slabs with an insulating base intercalated with photovoltaic solar slabs, such that wind suction force is reduced on the porous concrete slabs with an insulating base, preventing them from being lifted.
