Abstract (en)
[origin: EP2233042A2] The chair (1) has reinforcement bars (51) including mounting units (6) for mounting a seat bucket (5) at a supporting frame (2). The bars are partially designed as an elastic locking unit (61), which is locked automatically at the frame during mounting of the bucket, where the bar supports the locking unit. The frame includes a stopper limiting occurrence of deformation of the bars in a region of the locking unit opposite to a locking movement to a short measure than a measure necessary for disengaging of the locking unit, where the deformation is occurred during mounting of the bucket.
