Abstract (en)
[origin: EP2233060A1] The dishwasher has a rinsing container i.e. u-shaped hood, arranged at a base component i.e. base supporter, which is made of plastic. A guiding device (12) i.e. cylindrical tube, is provided as an integral element of the base component for holding and guiding multiple electrical lines (31). The guiding device is designed as an elongated groove or as an open channel (14). The groove or the open channel runs co-axial or axial parallel to a rotation axis (33) of a door. The door is supported at side walls of the base component in a swivelable movable manner.
