Abstract (en)

[origin: EP2233179A1] The device (1) has a base plate for supporting a foot of an individual (10), and equipped with a foot fixation unit i.e. strap (5). The plate is supported by a base (3) such that the plate is raised from a ground (13) when a bottom surface of the base rests on the ground, where length exceeding on a front part of the plate with respect to the bottom surface of the base is greater than length exceeding on a rear part of the bottom surface of the base with respect to the plate. The bottom surface of the base represents length less than or equal to length of the plate.
