Abstract (en)

[origin: EP2233401A1] The method involves molding a container (13) in a path of a web-type material (7) by deep drawing method. One of slip lids (14') is molded in a path of another web-type material (9') by deep drawing method, and the lid is attached on the container. The container is separated from the former web-type material. Edges of the container and edges of the lid are molded in an angular or bend form upwards against a foil level of the web-type materials. Knobs are provided at the slip lid and the container. The lid is partially sealed on the container. An independent claim is also included for a packaging machine with molding stations.
