Abstract (en)
[origin: EP2233620A2] Shielding fabric against electromagnetic radiation, especially designed for the protecting clothes, is characterized by a weft threads. Maximum each 10 th weft thread is a three - component bunch thread (11) that consists of electroconductive core thread (1) with a ferromagnetic. It is positioned in a rounding of electroconductive effect thread (2). This effect thread creates random accumulations (3) in a shape of solenoids on a core thread. The solenoids are fixed in a stable way on a core thread (1) by the means of binding thread (4). The warp thread and the rest of weft threads are made favorable of cotton threads. The threads of warp and weft are interlaced favorable with each other by the means of plain weave.
