Abstract (en)  
An accessory (2) of a radiator (1) for room heating, comprising at least a first type of longitudinal profile (6) in thermally conductive material for covering at least a longitudinal part of the radiator, the first type of profile (6) having an internal side wall (7) with a shape at least partially matching the perimeter side surface of the radiator part, an external side wall (8) suitable to considerably increase the thermal exchange surface of the radiator, and fins (9) for remote connection between the internal side wall and the external side wall delimiting channels (10) aiding the formation of convective hot air motions to increase the thermal yield of said radiator.
