Abstract (en)
[origin: WO2009103877A1] The present invention describes a method for preparing a catalytic composition used for the oligomerization, co-dimerization or polymerization of olefins in which the compound obtained when at least one compound of iron is brought into contact with at least one nitrogen-containing compound is subjected to an oxidation step before being mixed with an activator and optionally with a solvent. The present invention also describes the catalytic composition obtained by said preparation method and the use of the same for the oligomerization, co-dimerization or polymerization of olefins.
