Abstract (en)
[origin: US8393031B2] Detailed is a device for cleaning an immersed surface including a body and members for driving the body over the immersed surface; a filtration chamber which is provided in the body and which has: a liquid inlet; a liquid outlet; a hydraulic circuit for flow of liquid between the inlet and the outlet through a filtering device, wherein the filtering device includes a first filtering shell which extends towards the rear of the body, from a front opening; a second shell which is fitted to the first shell at the front thereof, these shells being able to be fitted together so as to form an integral filtering casing; in which case the second shell closes the front opening of the first shell, with the exception of a liquid inlet passage; the two shells being able to be separated from each other by disengaging the front opening of the first shell which acts as an opening for emptying this shell.
