Abstract (en)
[origin: WO2009080389A1] The invention relates to a transmission unit (1) having a transmission element (2) that is rotatably supported on the drive side and by means of which a drive torque can be transmitted onto a first driver (10) of a coupling element (3) on the output side, and having a load torque lock (12) by means of which torque introduced from the rotatably supported coupling element (3) on the output side via a first driver (10) can be locked, wherein the load torque lock (12) has a wrap spring (13) interacting with a cylinder element (14) that is disposed non-rotatably for locking the torque. The invention provides that the coupling element (3) has at least one second driver (11) interacting with the transmission element (2) for receiving a drive torque. The invention further relates to a drive transmission unit.
