Abstract (en)

[origin: WO2009092553A1] The object of the invention is to propose a friction layer carrier device and a method for the production thereof, the aim of which is to improve the production quality of friction layer carrier devices. A friction layer carrier device 1 is disclosed, comprising a base body 2, which has a base body contact surface 5, and a friction layer coating body 3, which has a coating contact surface 8, wherein the friction layer coating body 3 is attached to the base body 2 such that the base body contact surface 5 and the coating contact surface 8 are joined to each other in adhesive regions 10 by way of an adhesive 12, wherein at least one depression region 9, 11, which enables degassing of the adhesive 12, is arranged in the base body contact surface 5 and/or in the coating contact surface 8.
