Abstract (en)
[origin: WO2009074423A2] The cooker-fan unit has an air-directing unit in ventilating communication with a cooking compartment (12) of the cooker, which air-directing unit is delimited from the cooking compartment by a cooking-compartment air-passage unit or wall unit (36) and has through-passage openings (44, 48) for heated air streams which are generated by a fan and have their flow routed into the cooking compartment by air-directing elements. According to the invention, it is provided that, within an air-directing unit having at least one air-directing element, the through-passage openings (44, 48), in accordance with the predetermined flow direction, are directly assigned flow means which intercept the incoming flow and feed air streams to the through-passage openings (44, 48) in the same direction and with diversions.
