Abstract (en)

[origin: WO2009080727A2] A radiating module for a heating apparatus able to heat rooms comprises a first conductor plate (13) and a second conductor plate (14), associated with each other so as to define a central portion inside which a thermo vector fluid is able to flow, and heating members able to heat the thermo vector fluid. The central portion comprises a single channel (15), substantially coaxial with and in any case comprising the longitudinal axis of the radiating module (10).
