Abstract (en)
[origin: WO2009087055A1] The invention relates to a micromechanical pressure sensor with a substrate and a membrane, on which piezoelectric sensor elements are located. The aim of the invention is to provide a pressure sensor which has minimal dimensions and in which torsional loads of the membrane are extensively avoided. This task is solved according to the invention by an arrangement in which the substrate has a frame (1), on which the membrane (2) is arranged, wherein a centrally arranged mass element (3) is located on the underside of the membrane (2) and the membrane (2) is in each case provided with two partial reinforcements (2.1, 2.2) on striated sections, located between frame 1 and the mass element (3).
