Abstract (en)

[origin: WO2009106737A1] The present invention relates to a multicontact transparent tactile sensor (1) comprising two at least partially conducting transparent layers, said layers being spaced apart by an insulating transparent material (15), characterized in that at least one of said layers consists of a transparent sheet on which is deposited an array of conducting tracks (23, 24) whose width is less than 80 microns.
