Abstract (en)

The present invention is concerned with a body grooming device such as a hair removal device or a massaging device that comprises a drive (330), an application material supply (150) for supplying an application material at an application material supply outlet (154), and an atomizer unit (170) for atomizing the application material, which atomizer unit (170) comprises a brush-like element (171) having at least a bristle-like protrusion (172), said brush-like element (171) being coupled to the drive (330) so that the brush-like element (171) is driven during an operation mode of the body grooming device (1) such that the bristle-like protrusion (171) repeatedly contacts the application material supply outlet (154) of the application material supply (150). The special atomizer unit arrangement is simple, can be made in a cost efficient manner and is also effectively atomizing an application material, e.g. water, soap, lotion, gel etc.
