Abstract (en)

[origin: EP2236976A1] The device (10) has an infrared radiation emitting unit (22) emitting radiations in the infrared spectrum and including a parallelepiped chamber (34) that is supplied with fluid i.e. air, by a thermal energy producing boiler (20). The chamber has horizontal inner vanes that permit accumulation of thermal energy inside the chamber. A detection unit i.e. temperature sensor (48), determines temperature of the chamber or temperature of the fluid between the boiler and the emitting unit. A control unit (46) controls operation of the producing boiler based on the determined temperature.
