Abstract (en)  
[origin: EP2237250A1] The signboard (10) has a front plate (12) comprising masks (16), via which translucent areas are separated from non-translucent areas. The translucent areas are provided in a transparent disk (14), and the masks are attached on a side of the disk, where the side is distanced from light sources e.g. LEDs or laser diodes. Additional masks coincide with the former masks, and are attached on another side of the disk, where the latter side is adjacent to the light sources. The LEDs are designed as surface mounted device-chips, and the masks are designed as black foils.
