Abstract (en)
[origin: WO2009092604A2] The invention relates to a shelf, particularly for shop fitting, comprising two upright tubes (1, 2) which are provided on one or both sides with perforations (11) for inserting support arms (3), several pairs of support arms (3) which can be inserted into the perforations (11) of the upright tubes (1, 2), and several shelves (4) which are respectively supported by one pair of support arms (3). In order to cool or heat the chamber in which these shelves are installed, at least one mat-shaped heat exchanger (6) is disposed in the narrow space (5) between the upright tubes (1, 2) of the shelf, said heat exchanger being connectable to a line (24) supplying a liquid cooling or heating medium and to a line (25) discharging the cooling or heating medium once it has passed through the heat exchanger (6).
